- nguyenduyen.260903@gmail.com
- Portfolio

I am passionate about game design, especially casual puzzle and hybrid-casual games. I have experience in designing game levels, analyzing gameplay, building core loops, and creating game design documents. I am seeking a Game Designer position where I can contribute creative gameplay ideas, design engaging levels, and improve the overall player experience.

EDUCATION

University of Engineering and Technology – VNU 2021 – 2025

Bachelor of Agricultural Technology

- GPA: 3.65/4.0
- Valedictorian of the Class of 2025
- Awarded the Academic Encouragement Scholarship for 6 semesters

WORK EXPERIENCE

Game Designer | Blackgems Global

- Developed Game Design Documents (GDDs) defining core gameplay, game mechanics, rules, and player experience flows.
- Designed and developed **300+** Normal levels and **60+** Hard/Very Hard levels for casual pixel puzzle games, focusing on puzzle logic, difficulty progression, and challenge balance.
- Polished gameplay by optimizing visual effects, animations, and interaction feedback to enhance game feel and player experience.
- Analyzed level-level performance and player behavior through dashboards, using retention and engagement metrics to identify overly difficult or unengaging levels, then refined level design and difficulty progression to improve the overall player experience.
- Pixel Shooter Factory (Android): D1 retention of 29.3% in Tier 1–2 markets.
- People Flow (Android): D1 retention of 24.3% in Tier 3–4 markets.

PROJECTS

Flower Haven: Merge & Bloom

- Designed a casual merge puzzle game concept combined with flower shop management mechanics.
- Developed the core gameplay loop: merge seeds → grow flowers → create bouquets → complete customer orders → upgrade the flower shop.
- Designed the flower growth system and bouquet crafting mechanics based on customer requirements.
- Created a Game Design Document describing the gameplay, game systems, and development progression.
- **Link GDD**: Project Game Design Document

Game Design Study – Screw Jam

- Conducted an overview study of Screw Jam, including its casual puzzle genre, target players, and unique screw-removal and sorting mechanics.
- Analyzed the core gameplay, core loop, level system, and how the game increases difficulty through obstacles and special mechanics.
- Evaluated the player experience, visual style, sound design, and monetization model.
- Analyzed retention factors, key success elements of the game, and proposed gameplay improvement ideas.
- **Link GDD**: GDD Game Screw Jam

Flight Booking Website

- Served as Team Lead and Database Designer for a flight booking website developed using React.js and Next.js for the frontend, with Node.js and SQL for backend processing.
- Coordinated team tasks, designed the database structure, and contributed to features including flight search, seat selection, booking management, and user notifications.
- Technologies: Node.js, React.js, Next.js, SQL
- GitHub: https://github.com/QAirline-Group-6/frontE

Built a CO_2 database using satellite data from OCO-2 and OCO-3.

- Collected and processed satellite-based CO_2 data from OCO-2 and OCO-3 to support research on sustainable agriculture.
- Used Python and Google Earth Engine to filter, process, and analyze satellite data.
- Compiled CO_2 datasets, performed statistical analysis, and visualized results using Excel to identify trends and compare data.
- Leveraged AI tools to assist with Python coding, debugging, and optimizing data analysis workflows.
- Technologies: Python, SQL, Google Earth Engine, Excel, AI Tools

SKILLS

- GDD & Core Gameplay Design
- Level Design & Difficulty Balancing
- Gameplay Polishing & Game Feel
- Logical Thinking & Problem-Solving
- Basic Data Analysis & Game Analytics
- Basic Programming
- AI-Assisted Game Design
- Microsoft Excel / Google Sheets
- Notion / Google Docs
